

Reference for **Stephanie Tahiri**

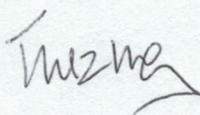

8th May 2019

I first met Stephanie 7 years ago when she brought her third child, who was born with a very rare eye condition, for eye check. I was impressed by her intuition, as she detected her son's condition very early on at the age of 2 months old, and also her determination to look for different and innovative ways to help her son overcome his visual difficulties.

Throughout the past years of interaction, I have had the opportunity to see Stephanie grow Play2see from an idea to a full program. The use of Art and Neuroscience behind its design makes this program unique, multi-domain and highly relevant.

I believe the approach is complementary to my domain of expertise as a paediatric ophthalmologist in diagnosing and treating pathological conditions of the eye. Armed with an artistic background and a detailed knowledge of the visual pathway, Stephanie has devised a way to enhance the children's visual potential by triggering their curiosity and encouraging them to use their eyes as well as all their senses to feed the brain with lots of pictures, thoughts and emotions.

I recommend Stephanie and Play2See, which I see as a valuable connection between eye care and education in children.
